

BACK TO NORMAL AVAILABILITY NOTICE

Normal Availability For The 720A Kelvin Varley Divider

By: Jack Somppi

Date: April 4, 2008

The 720A is back to normal availability. We succeeded to secure an ongoing amount of the critical parts we needed to keep this product in production for the foreseeable future. (It was announced in 2005 that the 720A was on a limited availability, with an pending end of production time.)

Now you can be assured that customers needing this instrument can plan on acquiring it, budget for it, order it, and receive a Kelvin Varley Divider that will provide years of reliable service to them.

**** Please remember that even with normal availability, this product has a long lead time – usually 20 to 26 weeks ARO. 720s are built to order, and have an extended testing time to insure their long term stability.

Finally, remember that for any similar ratio metrology needs, or any requirements with fast delivery needs, an excellent alternative is the 8508A/01. It is possible to make similar ratio measurements using the ratio measurement capabilities of the 8508A/01.

Good Luck and Successful Selling
